

MALWARE INVESTIGATION PROJECT

Endpoint Threat Analysis Report

1. Title of the Project

Malware Investigation – Endpoint Threat Analysis using Sysinternals & VirusTotal

2. Objective

The objective of this project was to conduct a thorough endpoint threat analysis on a test system. The investigation aimed to identify any signs of malware infection, suspicious processes, unauthorized network activity, or abnormal system behavior that could indicate a compromise.

3. Tools and Technologies Used

- Task Manager (Windows built-in)
- Autoruns (startup program enumeration)
- TCPView (active network connections)
- Command Prompt (network analysis)
- Process Explorer (process tree & file path analysis)
- VirusTotal (online malware hash scanning)
- Microsoft PowerShell (SHA256 hash extraction)
- Windows Event Viewer (system log analysis)

4. Dataset

The analysis was performed on a Windows 11 test system and Kali Linux (VirtualBox). Data collected included: active running processes (Task Manager), startup entries (Autoruns), live network connections (TCPView & netstat), process file paths and SHA256 hashes (Process Explorer & PowerShell), and system event logs (Windows Event Viewer) covering Security, Application, and System logs dated 08-06-2026 to 09-06-2026.

5. Methodology / Workflow

The investigation followed a structured 5-step approach:

- Step 1 – Process Analysis: Listed all running programs using Task Manager and reviewed CPU, memory, disk, and network usage per process.
- Step 2 – Startup Enumeration: Used Autoruns to identify all programs configured to launch at system startup across login, scheduled tasks, services, and boot execute categories.
- Step 3 – Network Connection Analysis: Used netstat -ano via Command Prompt and TCPView to identify all active TCP/UDP connections, listening ports, and established external communications.
- Step 4 – Malware Scanning: Extracted SHA256 file hashes of flagged executables using PowerShell and submitted them to VirusTotal for multi-vendor analysis.
- Step 5 – Log Analysis: Reviewed Windows Event Viewer for security-relevant Event IDs including failed logins (4625), successful logins (4624), and new process creation (4688).

6. Features Implemented

- Full process listing with CPU and memory metrics from Task Manager
- Startup program enumeration using Autoruns across all persistence locations
- Active network connection mapping using netstat and TCPView
- VirusTotal hash-based scan of suspicious file: infatica_agent.exe (18/70 detections – flagged as PUA/Trojan/Virus)
- Windows Event Log review for Event IDs 4624, 4625, and 4688

7. Results

- Running Processes: No suspicious or unknown applications were found. All active processes were attributed to known applications (Google Chrome, Microsoft Edge, WhatsApp, OneDrive, Teams, etc.) and standard Windows services.
- Startup Programs: No suspicious autorun entries detected. All startup programs were verified and signed by known publishers.
- Network Connections: Multiple established TCP connections were observed, primarily through port 8886 linked to infatica_agent.exe (PID 14660). This was flagged as a potential concern.
- VirusTotal Analysis: The file infatica_agent.exe (3.54 MB, SHA256: 4f966328f131988979eb1401e9ef512836b35e79502877e00566a261b58409cb) was

flagged as malicious by 18 out of 70 security vendors. Threat categories included PUA, Trojan, and Virus.

- System Logs: No multiple failed login attempts, logins at odd hours, or processes launching other processes unexpectedly were detected.

8. Challenges Faced

Identifying the exact malicious process among hundreds of active connections required cross-referencing the process name, PID, and file path across multiple tools. The file `infatica_agent.exe` appeared legitimate at first glance due to its system-service-like behavior, but VirusTotal analysis with its SHA256 hash confirmed it as a threat. Correlating netstat PIDs with Process Explorer entries was essential to identify the source accurately. And it was further confirmed to be safe on through analysis

.

9. Conclusion

The endpoint analysis revealed that the system was largely clean, with no widespread malware infection. This project enhanced skills in threat hunting, process forensics, network traffic analysis, and log correlation. It demonstrated the effectiveness of using layered, manual investigation techniques combined with online scanning tools for endpoint threat detection.

10. Screenshots

Screenshots captured during the investigation include the following,

1. List of every program running in the system – No suspicious or unknown applications found.

The screenshot shows the Windows Task Manager 'Processes' tab. The table lists various background processes, including Host Process for Windows Tasks, infatica_agent, Local Artificial Intelligence, and several Microsoft services like Office Click-to-Run, OneDrive, and Teams. Resource usage is shown as percentages for CPU, Memory, Disk, and Network.

Name	Status	11% CPU	83% Memory	1% Disk	0% Network
Host Process for Windows Tas...		0%	2.3 MB	0 MB/s	0 Mbps
Host Process for Windows Tas...		0%	2.1 MB	0.1 MB/s	0 Mbps
infatica_agent (32 bit)		0%	3.4 MB	0 MB/s	0.1 Mbps
Local Artificial Intelligence (AI) ...		0%	19.4 MB	0 MB/s	0 Mbps
Microsoft (R) Aggregator Host		0%	2.1 MB	0 MB/s	0 Mbps
Microsoft Edge Update (32 bit)		0%	0.8 MB	0 MB/s	0 Mbps
Microsoft Network Realtime In...		0%	2.1 MB	0 MB/s	0 Mbps

Mobile devices (2)		0%	12.4 MB	0 MB/s	0 Mbps
Phone Link (2)		0%	12.2 MB	0 MB/s	0 Mbps

The screenshot shows the Windows Task Manager 'Processes' tab with a different set of running applications. It is categorized into 'Apps (6)' and 'Background processes (56)'. The 'Apps' section includes Google Chrome, Microsoft Edge, Microsoft Word, Settings, Task Manager, and WhatsApp. The 'Background processes' section includes Acrobat Collaboration Synchronizer, Acrobat Update Service, AMD External Events Service, Antimalware Core Service, Antimalware Service Executable, App Actions, Application Frame Host, and Box Drive File System. Resource usage is shown as percentages for CPU, Memory, Disk, and Network.

Name	Status	17% CPU	85% Memory	1% Disk	0% Network
Apps (6)					
Google Chrome (16)		0%	250.8 MB	0 MB/s	0 Mbps
Microsoft Edge (22)		0.7%	2,047.1 MB	0.1 MB/s	0.1 Mbps
Microsoft Word (32 bit)		0%	50.9 MB	0 MB/s	0 Mbps
Settings		0%	0 MB	0 MB/s	0 Mbps
Task Manager		5.5%	68.3 MB	0 MB/s	0 Mbps
WhatsApp (8)		0%	439.4 MB	0 MB/s	0 Mbps
Background processes (56)					
Acrobat Collaboration Synchron...		0%	14.2 MB	0 MB/s	0 Mbps
Acrobat Update Service (32 bit)		0%	1.3 MB	0 MB/s	0 Mbps
AMD External Events Service ...		0%	0.6 MB	0 MB/s	0 Mbps
Antimalware Core Service		0%	2.7 MB	0 MB/s	0 Mbps
Antimalware Service Executable		1.1%	172.7 MB	0 MB/s	0 Mbps
